

Mr. Eberts

Information Processing 1A

Welcome to Information Processing! A boring name for a fun class where you can learn to do anything you want to do with computers - From keyboarding to digital video production or 3D animation!

All students will complete an **Introduction to InfoPro**, consisting of several small assignments designed to give you a sample of what you can choose to do with your time in the class. This part of the course is designed to develop skills in file management, basic hardware and software operations, text entry and workstation routines.

The introductory assignments will be marked **and count for 10%** of every module you complete afterwards.

After the introduction is completed, students may choose from any of the introductory modules offered. A list of these modules has been provided on the reverse, descriptions and outlines of each can be found on the class website (www.strathmorehighschool.com/infopro). You are expected to complete 3 modules during the quarter-semester. Many students do more, earning extra high school credits which can be a big help later.

A final mark will be determined for each completed module. There is no “average” mark for this class, but rather the individual module marks are reported. Failures are recorded, but are not reported to Alberta Education or averaged with other marks.

Use this space to record what 3 modules you are interested in:
